## NOVEMBER 2018

Open to all students whose mathematics classes come solely from the following list:
Math 92, Math 105, Math 151, Math 161, Math 162, Math 163, Math 165, Math 177, Math 287, Math 185, Math 241, or Math 277 or their equivalent.
Directions: Write a complete solution to the problem below showing all work. Your paper must have your name, W\#, and Southeastern email address. Solutions are to be placed in the envelope for Problem \#1 located in the Department of Mathematics Office, Fayard 308 by 4:30 p.m., Thursday, November 29. No late papers will be accepted.
All papers with a correct solution will be entered in a drawing for a great prize!
Questions concerning the problem of the month should be sent to either Dr. Tilak de Alwis (tdealwis@selu.edu), Dr. Randy Wills (rwills@ selu.edu) or Dr. Dennis Merino (dmerino@selu.edu)

## PROBLEM: Special Dates!

The $21^{\text {st }}$ century runs from January 1, 2001 to December 31, 2100. We can represent dates in the $21^{\text {st }}$ century using the normal convention $\mathrm{mm} / \mathrm{dd} / \mathrm{yy}$, where $y y=00$ corresponds to the year 2100. For example, 05/14/62 corresponds to the date May 14, 2062.

For the years 2001 through 2099, we call a date special if $(\mathrm{mm})(d d)=y y$. For the year 2100, we call a date special if $(m m)(d d)=100$. So, for example, $05 / 14 / 62$ is not special since $(05)(14)=70 \neq 62$. On the other hand, $12 / 03 / 36$ is special since $(12)(03)=36$. As another example, note that $04 / 25 / 00$ is special since $(04)(25)=100$.

How many special dates are there in the $21^{\text {st }}$ century? Show all your work.
