

**Department of Computer Science
Report of Use of Assessment Results
For Academic Year 2006-2007**

Goals and Outcomes:

Goal 1: To provide students with a broad understanding of computer science, as recommended in nationally accepted program guidelines.

- A. Expected Outcome: *Computer Science seniors will compare favorably to graduates to other Computer Science programs, nationwide.*

Assessment: *SLU graduating computer science majors will take the ETS Major Field Assessment Test in Computer Science and will achieve an average score above 50 percent in the areas of Programming and Software Systems.*

Scores (expressed as mean percent from the MFAT were as follows:

Area	Spring, 2007 graduates
Programming	43
Systems	38

Area	Fall, 2007 graduates
Programming	56
Systems	31

Goal 2: Computer Science majors will understand software development principles and will be able to successfully apply them.

- A. Expected Outcome: *Computer Science students in CMPS 411, Software Engineering, will have felt adequately prepared to tackle a major software development project.*
Assessment: *75% of the students will indicate, on the course exit survey, that they felt that their freshman, sophomore and junior-level coursework at least “adequately prepared” them for the project in CMPS 411.*
- B. Expected Outcome: *Computer Science students in CMPS 411, Software Engineering, will successfully complete a major software development project.*
Assessment: *75% of the students will earn a grade of “B” or better on the project.*

In Fall 2007, 81% (11/14) of the CMPS 411 students indicated that their previous course work at least adequately prepared them for the capstone course. 85% scored a B or better on their projects.

Goal 3: Computer Science graduates will feel adequately prepared for computing careers or for graduate studies in computer science.

A. *Expected Outcome: Computer Science graduates will feel adequately prepared for a career in computing or for graduate studies in computer science or both.*

Assessment: In the "Survey of Undergraduate Alumni", 75% of computer science graduates will be Satisfied or Very Satisfied with the "Overall Quality of Your Degree Program".

B. *Expected Outcome: Computer Science graduates will feel that their course work related directly to their jobs or their graduate studies or both.*

Assessment: In the "Survey of Undergraduate Alumni", 75% of computer science graduates will respond, that the concepts they learned in the degree program courses were relevant as either satisfied or very satisfied.

In the 2006-07 Survey of Undergraduate Alumni, 16 of the 22, or 73%, of the respondents indicated that they were Satisfied or Very Satisfied with the overall quality of the program. 86% indicated that the courses in the degree program were relevant.

Discussion:

Goal 1: The spring graduates fell slightly below target in Programming, but fall graduates were above the target. Both semesters were well below target in Software Systems. A large part of the low scores is a lack of motivation on the students' part. The results are not factored into any of their course grades, and we receive the results too late to use as a go/no-go determinant for graduation. And, because most of them feel inconvenienced by having to give up time to take the tests, many of those go in with a negative, at worst, or don't-care, attitude at best, toward the test.

We will discuss this within the department, and with assessment folks outside the department, to determine if we should continue having our students take the test, and, if not, what should take its place.

Goal 2: In the course exit survey, the students were asked in which areas they felt less than prepared. Most stated that they felt prepared to use the languages/concepts that they chose for their projects, because those languages and concepts had been taught in earlier classes. Examples of areas where students felt less prepared were related to their specific projects. These include GUI design, application specific topics such as graphics and neural networks. However, these students had learned computer science fundamentals well enough that they were able to build on that foundation to learn what they needed to successfully complete their projects. In that sense, the program is preparing them for what they can expect when they enter the workforce.

Goal 3: In the 2006/07 Survey of Alumni, 63% indicated that his/her education was either Effective or Very Effective in preparing him/her for employment or graduate school.

Actions to be Taken:

- (1) Determine whether the Major Field Test in Computer Science is the best measure for us to use, and if not, what should replace it.
- (2) In the short-term, advise CS majors in the scientific emphasis to take CMPS 383, for team-building, and CMPS 439, for database concepts, as their upper-level electives. Determine what, if anything, should be done in the long term.
